

Bovan Brown

A balanced breeding programme has produced the Bovans Brown, a highly versatile layer combining robustness with performance.

As a result of optimal early maturity, high peak production, great laying persistency, and a flat egg weight curve the Bovans Brown produces high numbers of first quality dark brown eggs. Adaptable and easy to manage, the Bovans Brown adjusts well to different climates, management systems and housing systems, and is very successful in cage free environments.

	Free Range	Colony
Eggs per hen housed to 72 weeks	312	323
